A Simple, Cost-effective
Solution to Digitalize
Asset Tracking
& Management

www.vziibl.com

What is Vziibl & The Technology Behind It?

- 01 Web based indoor tracking solution to track individuals, products, and assets in real time with IoT devices.
- 02 Driven by BLE (Bluetooth Low Energy) to guarantee uninterrupted monitoring of assets locations and their movements within a facility.
- 03 Vziibl app boosts assets data visibility in a full array of configurable dashboard, instant alerts, and actionable reports.

Vziibl At One Glance

Fully automated through software

Quick deployment. Can run on existing WiFi network

Cost effective and scalable for future system upgrade

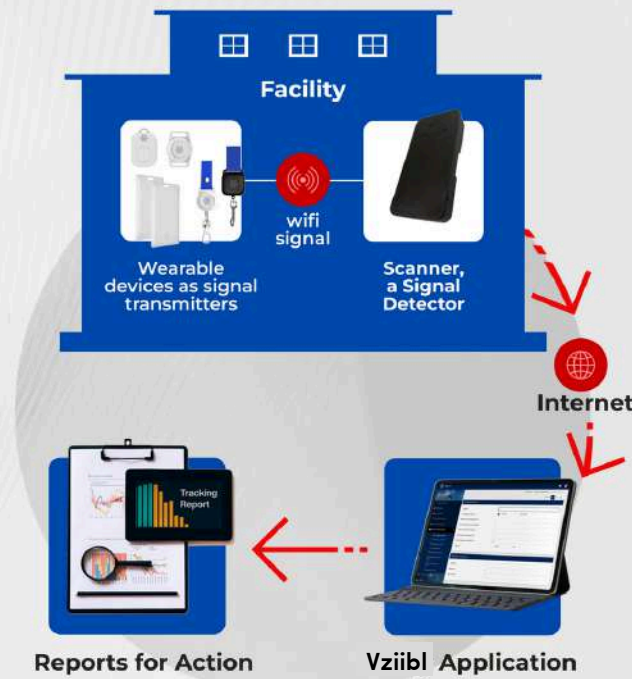

Highly personalizable to provide live analytics

Flexible and secured on both cloud and/or on-premises environment

Easy customization tailored for any indoor asset management use case

How Asset Tracking Happens?

Signal detectors

Installs signal detectors at specified locations. The capturing range of signal detectors mark a distinct zone.

Wearable Devices

Assigns wearable devices to all users/assets. These devices transmit location data.

Track Movements

Determine contact by computing which assets were in which zone, when, and with whom else and for how long

Alert

Inform all concerned stakeholders via notifications and reports, prompting them to take necessary actions.

Vziibl For Real-World Asset Management Use Cases

01. Occupancy & head count
02. Building visitors tracking
03. in-and-out logs in buildings, elevators, floor level
04. Assembly spot, conference rooms, coffee areas
05. Critical/Sensitive assets monitoring
06. Covid-19/Infection disease notification
07. No-go-zone notification
08. Emergency mustering
